[2 × 4 = 8]

Noise can cause wide spread damage to the human body. Environmental noise affects the nervous system by brief exposure to intense noise. Excessive noise exposure can result in headaches, fatigue, dizziness, high blood pressure and tense muscles. Congenital defects can be caused in an unborn child by intense and subtained noise as experienced by female construction workers. Noise is measured in decibels (DB) and psychological reserch has proved that 90 DB causes deafness and 140 Db madness.

Que. (i) What can cause widespread damage to the human body ?

(ii) How is temporary deafness caused ?

(iii) How nose is measured in ?

(iv) Noise is measured in :

(a) 90 DB causes

(b) 140 DB causes

(v) Give the little of the passage.

Q. 21. Read the extract carefully and answer the questions given below it :

It seems that Nan-kaka (as I call him), who had come to see me in hospital an my first day in this world, noticed a little hole near the top of my left ear lobe. The next day he came again and picked up the body lying on the cribe next to my mother. To his utter horror, the discovered that the boy did not have the hole on the left ear lobe. A frantic search of all the cries in the hospital followed, and I was eventually located sleeping blissfully beside a fisher woman, totally ablivious of the commotion I had caused! The mix up, it appears, followed after the babies had been given their bath.

Que. (i) What did Nan-kaka notice when he came to see the boy in hospital ?

(ii) What did Nan-kaka discover the next day ?

(iii) Where was the speaker eventually located ?

(iv) Find words from the passage which mean the same as the following :

(a) Sudden noisey confusion or excitement;

(b) Not a ware of something.
